

Reporting architecture and administration

Certification Training

Artsyl docAlpha Certification Training

Want to get MORE out of your investment in docAlpha? Artsyl Technologies invites you to participate in the upcoming docAlpha 5.0 certification training — an in-depth, hands-on workshop for Artsyl partners and docAlpha users.

Join us from **April 25-29** in St. Petersburg, Florida for five days of intensive classroom training focused on **docAlpha 5.0** technologies. Topics to be covered include multi-tenant deployment, new workflow actions, new integrations, new reporting features and many of the new functions available in docAlpha 5.0. This deep technical dive will be a huge asset for your professional services and support teams, providing them with the tools and knowledge to succeed in their daily tasks and challenges.

To register for the training please contact:

Artsyl: (905) 326-0676 sales@artsyltech.com
or (301) 525-5405 jeff_m@artsyltech.com

Artsyl docAlpha Training Scope

The training will cover all technical details of docAlpha to master the all sides of the software operation. It starts from the product deployment and proceeds to the administrator and solution architect levels. The trainees learn how to use the product efficiently and how to set up and configure workflows, design capture logic and distribute tasks among the team members.

The sessions cover working with users and user groups and setting compliance-friendly automatic user policies, traditional batch splitting as well as document assembly based on batch structure; address flexible batch splitting and routing based on automatic triggers, harnessing the whole power of the hardware running the system by using multi-threading, multi-processing and parallel multi-service approaches; setting up the licensing from simple local networking to distributed networks and centralized control of licenses used by branch office multi-server installations and cloud deployments.

The trainees will obtain set of skills to be proficient with the Design Station. During the training lecturers will cover the set up procedures for fully automatic data extraction from fixed forms and semi-structured documents. Every lecture will be followed with a training exercise to practice new skills and concrete obtained product knowledge. The Designer training starts from learning the most important tools and approaches to setting up automatic document classification and data capture. Those tools are then used in several practices of increasing complexity, for tasks including context-based searches, regular expression extraction, cascading classification, multi-alternative searches with weighted criteria, relations-based searches and other advanced classification and extraction tasks. This part of the training is followed with learning the details of the Designer Wizard and where the Wizard can save time and efforts in simplifying the classification and extraction jobs setup.

The training also encompasses new key features found in docAlpha 5.0, including:

- Multi-tenant deployment
- Cascading, multi-step document processing
- New InvoiceAction workflow rules (early payment discount, late payment detection)
- Acumatica and NetSuite connector set-up
- CMIS image-only export connector set-up
- Database look-up rule options and optimization

Date & Location

Location: Hotel Indigo, Conference Room

Date: April 25-29, 2016

Time:

April 25: 11:00 a.m. - 5 p.m. EST

April 26 - 28: 9:00 a.m. - 5 p.m. EST

April 29th: 9:00 a.m. - 2 p.m. EST

Address: 234 3rd Avenue North, St. Petersburg, FL, 33701

Meal: Light snacks and lunches during the training days are provided by Artsyl Technologies. Please inform us in advance if you have special dietary requirements. It will be our pleasure to accommodate all reasonable requests.

docAlpha Key Benefits

- Automate manual, document-driven processes
- Eliminate manual data entry
- Increase data accuracy
- Reduce routing and approval cycle times
- Ensure better compliance
- Deliver better process transparency

Artsyl develops **Smart Process Technology** to Power Process Improvement. Artsyl technologies automate the most painful parts of data- and document-driven processes, reducing costs, improving data accuracy, accelerating workflows, improve visibility and helping ensure compliance in most any business process.

Artsyl's **Smart Process Platform**, called docAlpha, is used to create **Smart Process Applications**. A Smart Process Platform is technology which allows users to implement Multi-Channel Document Capture (Scans, Emails, Electronic, Mobile, Fax, FTP and WebDAV), Advanced OCR and Text Recognition, Document Classification, Automated Splitting, Dynamic Routing, Data Extraction, Rules Based Validation, Approvals and Application Integration in order to Improve Process Performance.

Smart Process Applications (SPAs) are specific workflows which have been configured using docAlpha in order to achieve optimum performance of a specific work process.
